

# PIN-BOARD

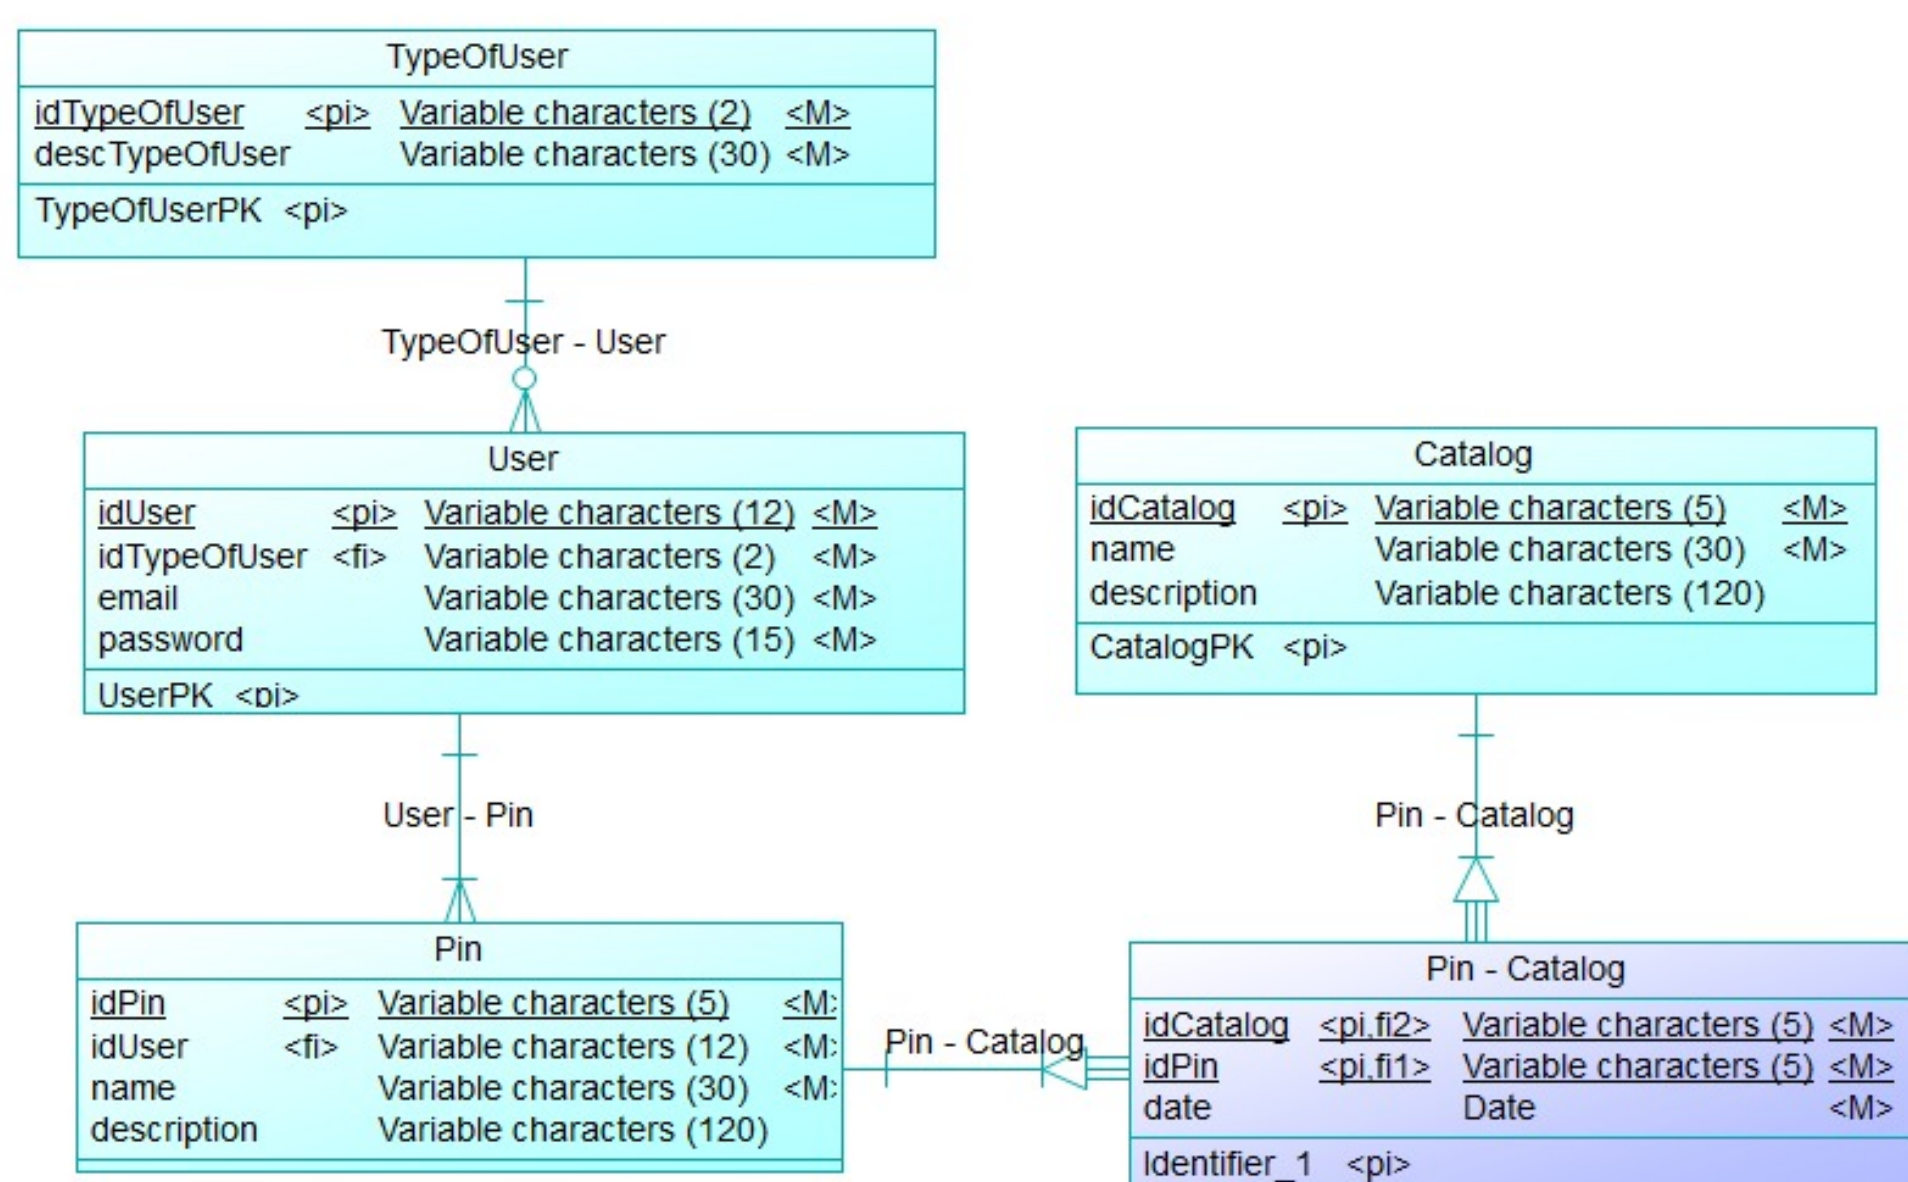

Project Software-Modeling/ Juan Diego Lozada 20222020014 / Edison Alvarez 20222020043

## Introduction

The main concept of our app is to help users discover photos shared by others on various boards Through these visual collections, individuals can find inspiration and ideas for their own projects and plans, design the model with good practices

## Planning DB

The structure of the ER diagram is a scalable and flexible due to if we need to add something else like companies, the rest of the data will not have a change

## Future Directions

The app will be more friendly, incorporating more stakeholders, benefiting all the participants

## Conclusions

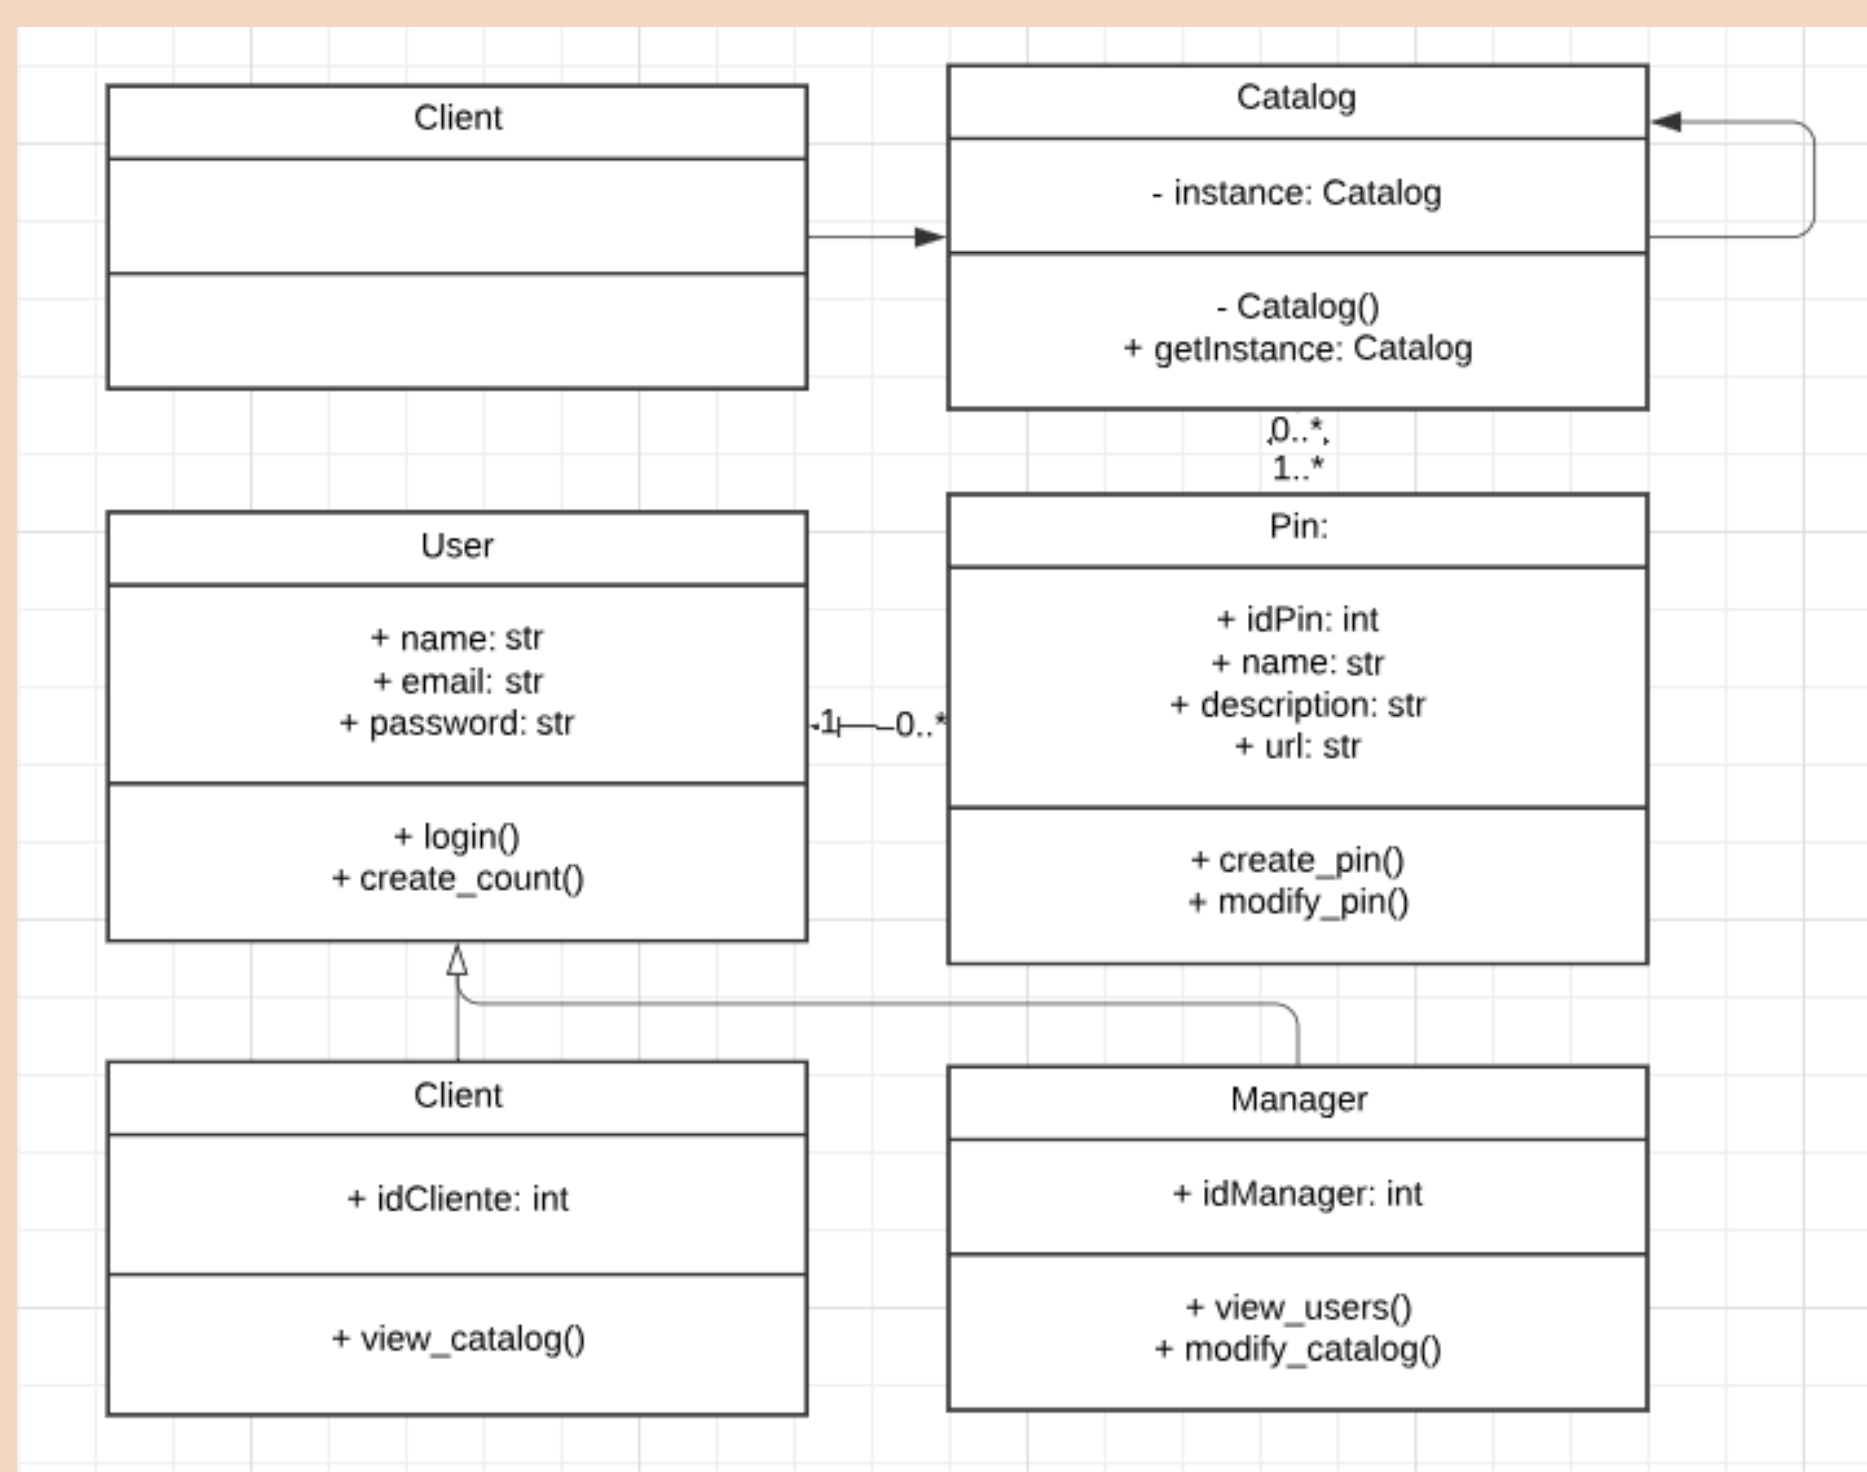

The approach of the program is on a good way, if we have obstacles in a future will be easy get over them.

## Goal

The purpose of creating this app is to assist people who encounter difficulties in generating ideas, experiencing moments where their minds go blank

## Methods

We implement a design pattern creational that is Singleton, due to reduce consumption of memory, and all the users will see the same, so we can have only one instance and provide a global point of access to it It's more easier have control and access to the methods
